WHERE DOES YOUR RECYCLING GO?

When we recycle, materials are given a second life.
Natural resources are preserved and we build a cleaner and healthier community.

Your recyclables are taken to Materials Recovery Facilities (MRFs) where they are sorted, processed and sent to other companies in Michigan to be used as feedstock and made into new products.

PADNOS uses metals, paper, electronics, and plastics which are processed into scrap feedstock to be sold to steel mills, foundries, paper mills, and plastic manufacturers

UP Paper uses recycled paper to manufacture Kraft paper rolls that become tape backing, gift wrap, and other common packaging materials

Design Declassified sources recycled plastics (e.g., milk jugs, detergent bottles, rigid plastics) and converts them into plastic sheet materials that can be used for countertops, furniture, lighting, and home goods.
