

COMMUNITIES **WITHOUT** LEAD SERVICE LINES

Use this list of important questions to help guide a discussion with your water system.

- **How do we know there are no lead service lines in our community (e.g., recordkeeping, records, construction standards, permits)?** *The state has posted a preliminary inventory of distribution materials. This should be updated annually as water supplies replace lead service lines and identify materials for “unknown” service lines.*
- **What is the range of lead compliance sampling results?** *This should be posted in the annual consumer confidence / water quality report.*
- **Do we resample the homes with the highest lead levels every compliance sampling period?**
 - How are sample sites selected in the LCR? *LCR requires the same homes be sampled during each sampling period.*
- **What are we telling residents about the risk of lead in their water?**
 - What actions are we telling people to take in their own homes?
 - Is this sufficient to protect our residents? *Homes can test high for lead even without a lead service line.*
